EXPERIENCE

Front-end Developer / Gauge

2016 - Current

Company: Gauge is a brand consultancy. It guides her customers to position their brand according to the purpose of the business.

Responsibilities: As a Front-end Developer, I am responsible for creating and maintaining a user interface components library (built with React), so that I and other developers can use it in application's company. In addition, I am responsible for maintaining the entire front-end application architecture of a company product.

Front-end Developer / Kenoby

2015 - 2016

Company: Kenoby is a startup that develops a web platform to manage the process of recruitment and selection of people for job occupations.

Responsibilities: As a Front-end Developer, I was responsible for developing new features to the application (built with AngularJS), fixing bugs, and providing the necessary conditions for the marketing team to sell the product. An interesting detail was that the entire development team worked remotely.

Front-end Developer / QMágico

2013 - 2015

Company: QMágico is a startup that develops a web educational platform to manage content and help educators to give a more personalized teaching for each student.

Responsibilities: As a Front-end Developer, I was responsible for building user interface components (UI) and maintaining a consistent and scalable architecture for the application's CSS.

Java Developer (Internship) / Funcate

2012 - 2013

Company: Funcate is a non-profit private institution whose main mission is collaborate to government research organizations as INPE (National Institute for Space Research).

Responsibilities: As an intern, I worked on development of two applications written in Java. The first was a real estate regularization system and the second a timesheet control.
